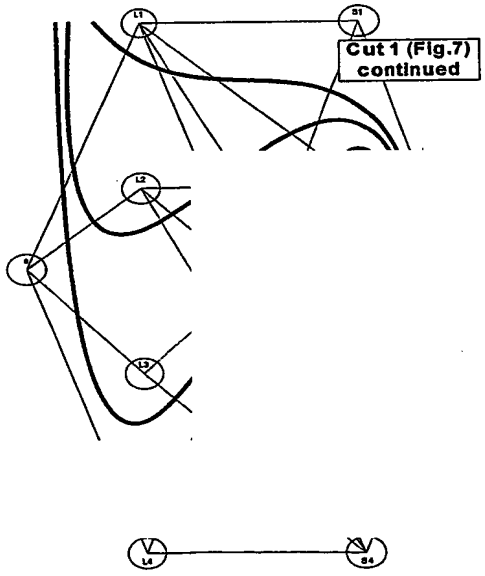

Fig. 9

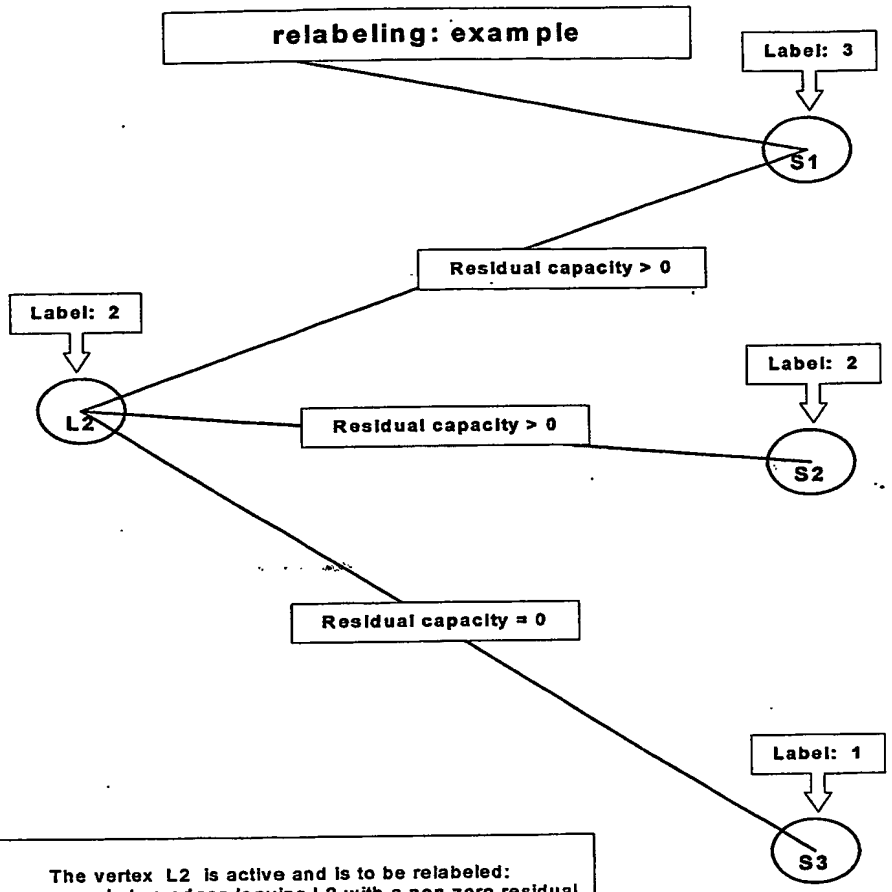

The vertex L2 is active and is to be relabeled:
There are only two edges leaving L2 with a non zero residual capacity: the edges leading to the vertices S1 and S2. The smallest label of those two vertices will be the basis for the relabeling operation of vertex L2: The new label will be the value of [label of S2] + 1:

new label of L2 = 2 + 1 = 3
